

$$T = \frac{K \times B}{\sqrt{GM}}$$

$$B = 46 \text{ cm}$$

$$T = 1,264 \text{ s} \approx 1,3 \text{ s}$$

$$GM = 2 \text{ (KM - KG = 18 - 16 = 2 cm)}$$

$$1,3 \text{ s} = \frac{K \times 46 \text{ cm}}{\sqrt{2}}$$

$$K = \frac{1,3 \times \sqrt{2}}{46} = 0,04 //$$
